SafeGrip System

SafeGrip® designed for Safety

SAFEGRIP®

For ultimate peace of mind about safety, SafeGrip® is an ideal product for public projects, bridges, walkways, playgrounds, outdoor staircases, in fact, any area where extra grip is required.

Standard profile contains 2 lines of SafeGrip®. However, additional lines can be added on request.

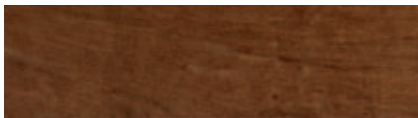

A carefully controlled manufacturing process ensures that the SafeGrip®

mixture of polyurethane and quartz sand gives consistent grip content throughout the material. Tested under severe conditions, SafeGrip® has proven its durability both over time and in diverse weather conditions.

We do not recommend SafeGrip® for areas of barefoot usage.
